Enrol at: www.painsandbrains.com

In-Person 2 day Practical course

About: First of a 2-part series of practical skills for all physiotherapists who care for patients with persistent musculoskeletal pain. Lecture, videos, case studies, practicals.

Workshops: Analysis of individual patient characteristics and coping styles, context of their pain, diagnosing NOCIPLASTIC PAIN and the application of individualised advice and rehab strategies.

Goal: Understanding sensorimotor changes in persistent pain, who is likely to have them and how to retrain them.

Hands on: Sensory modulation techniques, sensorimotor retraining e.g. Tactility, oculomotor, midline crossing, primitive reflexes and more...
